Xerox Confident Color solutions are designed to help you grow your business. Plus, you will get the most out of your Xerox products with our powerful Color Services.

The Xerox Confident ColorWorks Program: Get your color workflow on target
This offering is designed for operators, pre-press professionals and designers who need to intelligently manage the color of Mac or PC monitors, the print engine and the Digital Front End. The SPPC will perform profiling services, establish DFE color settings, create a quality control process, deliver critical color training and more. There are two levels of training to choose from: The Standard Level and the Advanced Level.

Digital Color Management Certification: Education that drives measurable business results
Xerox, in partnership with X-Rite PANTONE®, and IDEAlliance + IPA, offers a certification program designed to educate your staff in the process and implementation of digital color management. This interactive, web-based course is available to your staff 24/7 and provides relevant, hands-on activities, reinforces color concepts and tests for understanding. Plus, a formal certification is issued to validate your knowledge and skill set.

G7® Master Printer Qualification: Improve gray balance and color consistency
This course helps printers, pre-press houses and creative firms incorporate the G7 methodology into their workflow. Our Xerox G7 Expert will guide you through the G7 qualification process, and leave you with Standard Operating Procedures to ensure that you can consistently meet the G7 specification. This package includes 5 days of on-site consulting and training, a membership with the IDEAlliance, and a G7 Master Printer Qualification.

Color Consulting Services: Education, processes and tools to ensure quality, accuracy and consistency
Individuals responsible for controlling and maintaining color on your Xerox equipment will learn how to measure color and create baseline standards. Our goal is to help you achieve consistent, predictable color over time. The SPPC will help your staff to create a quality control process, review calibration procedures, create custom output profiles and manage your color output. Color Consulting Services may take up to 5 days to complete.

Xerox Color 800/1000 Press Skills Enhancement Workshop: Fire-up your productivity and increase your profits
Your personnel will learn detailed information concerning Color Management at the RIP, how to work with spot colors and additional RIP features including hands-on learning with several lab exercises. We also instruct you on Adobe® Acrobat® Preflight Settings, Adobe Color Settings and how to design for Clear Dry Ink.

Color printer profiling: Control your color, day in and day out
Color Printer Profiling allows you deliver more outstanding color and more saleable prints. This 2 day course helps you get better color matching between your Xerox digital color printers, your iGen family of presses and/or your offset press. There are 2 different offerings: The SmartPress Production Consultant (SPPC) profiles your press or we teach you how to create profiles.
Xerox Workflow Assessment: Get ready to race forward and streamline your business

A Xerox SmartPress Production Consultant (SPPC) will help you improve the overall efficiency of your shop. This one week course is for print professionals who seek new ways to reduce costs, support diverse data streams, maximize the capacity of your operations and optimize workflow to increase efficiency.

Executive Boot Camp: A strategic overview of your iGen family press

This one-day event targets print production management executives from mid-sized to large printing operations who seek basic knowledge of iGen3, iGen4 or iGen150 capabilities, and a broader understanding of the implications of this technology for their managerial strategy.

Design for Digital: Gain a better understanding of digital technology and file creation

This one-day workshop can be taught to your in-house designers as well as to your external designers. Attendees are taught skills and techniques to help them prepare designs correctly for digital printing.

Let’s Get Digital: A seminar designed to make workflows more efficient

This half-day seminar was designed to introduce color management concepts to those considering making the leap from black and white or highlight color to full digital color printing.

Color Management Training: Create consistent color output even across multiple devices

This is an invaluable one-day workshop for prepress managers and prepress technicians. After identifying the key facts about your devices, workflow and experience of your people, we will focus on the most critical issues and tailor the program so you get the maximum benefit.

Advanced Color Management Training for the iGen family of presses: Produce consistent color

We help your operators, designers and pre-press professionals take full advantage of your press. We cover color fundamentals, designing for digital printing techniques, pre-flighting PDF files and printing from Adobe applications.

Certified Operator Training for the iGen family of presses: Create highly skilled and efficient operators

This is a 3 week course for new iGen3, iGen4 or iGen150 operators. Operators receive Xerox certified training on the Digital Front End, troubleshooting, problem solving, and advanced press maintenance. Week 1 will be conducted at one of two National Customer Training Centers: Rochester, NY or El Segundo, CA. Weeks 2 and 3 will be conducted at your site.

Xerox Productivity Plus for the iGen family of presses: Boost productivity and increase uptime

This two week course, taught at the Xerox National Customer Training Center in Webster, NY, enables operators to become certified Customer Technicians. Operators receive a service manual and special parts, along with training to access diagnostics, and troubleshoot fault codes and image quality artifacts. Giving your press operators greater self sufficiency will help maximize your uptime by increasing productivity and print volume.

Boot Camp Training for the iGen family of presses: The certified training you need

This course is for new iGen3, iGen4 or iGen150 operators who need to expand their abilities to include certified advanced customer maintenance activities. We train in one week modules. One Module: One 40-hour week. All three Modules: 120 hours, or three 40-hour weeks.

One Week Expert Training for the iGen family of presses: Reap the full benefits of your new press

This training is designed specifically for existing iGen press customers who are upgrading to another iGen family press. This one week curriculum expands upon the standard 2 day iGen family update training.
